Fix to problems with torrents not downloading with transmission on Debian unstable and Ubuntu 9.04 Jaunty

Author : admin

There is a problem on Ubuntu Jaunty and Debian unstable with torrents not downloading with the default torrent downloader transmission. Iâ€™ve noticed in transmissionâ€™s configuration files itâ€™s configured to use a port for â€œIncoming Connectionsâ€• with number 51413. Anyways my machine is
behind a router and has a local IP address and consequently is not accessible through the outside world on that port. Therefore I had to configure my router to do port redirect (port forwarding) of port 51413, that fixed my torrents download issues on my Linux.
