How to revoke user global privileges in MySQL

Author : admin

I've recently realized one of the users I have added to one of the MySQL servers I do managehas actually some included a list of some of the global privileges.
This extra privileges the user had was actually something that was to be removed since theuser is not supposed to be able to list all existent databases on the MySQL server and things alike:

You can see below the excact SQL queries I had to issue to revoke the granted global privileges for the **username**.
Note to change the *username* before you execute the below queries:

REVOKE ALL PRIVILEGES ON * . * FROM 'username'@'localhost';
REVOKE GRANT OPTION ON * . * FROM 'username'@'localhost';
GRANT USAGE ON * . * TO 'username'@'localhost' WITH MAX_QUERIES_PER_HOUR 0 MAX_CONNECTIONS_PER_HOUR 0 MAX_UPDATES_PER_HOUR 0 MAX_USER_CONNECTIO
