Make Icedove a.k.a. Thunderbird have a Gnome look

Author : admin

I wanted to make my preferred mail client application Thunderbird look a bit more decent and Gnome like. Thus I've downloaded tango_icons_for_thunderbird-0.7.0-tb.jar. The add-on is also available for download via Thunderbird's Official Addon web page. Another option for changing the outlook of Icedove (as named in Debian for some licensing reasons) is to use GNOME-Tb2 a thunderbird theme addon by Hugo GonÃ§alve. END-----
