Play pacman arcade fork in Google

Author : admin

Check out www.google.com/pacman/ .
It appears Google has introduced a new "service" a google search engine with embedded pacman in it :) This guys are serioulsy insane. A friend of mine has sent it to me via Skype and at first I thought google hassimply made http://www.google.com/pacman to open up google with an image of pacman instead of Google.
Few moments later I realized, that the banner in **www.google.com/pacman/** is actually not a banner buta completely playable copy version of the original world famous arcade game Pac-Man
The game even support 2 players :). In order to play the game you'll need to **insert a coin** just like in the good old times, in Pacman powered Google search engine interface you will find the insert coin button which substitutes the usual **I feel lucky** one.
