

Fix "checking build system type... Invalid configuration `x86_64-unknown-linux': machine `x86_64-unknown' not recognized" on ./configure

Author : admin

I'm trying to compile vqadmin on x86_amd64 (64 bit Debian) and I got error during `./configure`. The error I got is as follows:

```
debian:~/vqadmin-2.3.7# ./configure --enable-cgibindir=/var/www/mail/cgi-bin --enable-  
htmldir=/var/www/mail/ --enable-isoqlog=y  
checking for a BSD-compatible install... /usr/bin/install -c  
checking whether build environment is sane... yes  
/downloads/vqadmin-2.3.7/missing: Unknown `--run' option  
Try `/downloads/vqadmin-2.3.7/missing --help' for more information  
configure: WARNING: `missing' script is too old or missing  
checking for gawk... gawk  
checking whether make sets $(MAKE)... yes  
checking build system type... Invalid configuration `x86_64-unknown-linux': machine `x86_64-unknown'  
not recognized
```

So my compile failed with:

```
checking build system type... Invalid configuration `x86_64-unknown-linux': machine  
`x86_64-unknown' not recognized
```

Thankfully, there is a tiny script which originally is part of the CVS project. I've modified a bit the script to remove few lines of code which are not necessary. The ``x86_64-unknown-linux': machine `x86_64-unknown' not recognized` fix script [fix_x86_64-unknown-linux-gnu.sh is here](#)

To fix up the broken configure all required is:

```
debian:~/vqadmin-2.3.7# sh fix_x86_64-unknown-linux-gnu.sh
```

Next on I could compile normally again **vqadmin** just fine.
