

How to change / reset lost or forgot TightVNC administrator password

Author : admin

I have installed **TightVNC** to a Windows host just a few weeks ago in order to be able to manage remotely a Windows host and forgot to write down the administrator password :) (stupid!)

I had to explain to a friend remotely how to change the TightVNC admin password and it was a complete nightmare!

Shortly here is the exact menus one who wants to reset the password of a TightVNC server after forgotten:

**Start -> All Programs -> TightVNC
-> TightVNC Server (Service Mode) ->
TightVNC Service - Offline Configuration.**

In the configuration dialog to popup there are the **Server** and **Administration** tabs through which a new password can be set.

After the password is change either a restart of the TightVNC server is necessary or a restart of the Windows PC.
