

## How to synchronize with / from Remote FTP server using LFTP like with rsync

Author : admin

Have you ever been in a need to easily synchronize with a remote host which only runs FTP server?

Or are you in a local network and you need to mirror a directory or a couple of directories in a fast and easy to remember way?

If so then you'll be happy to use below *LFTP* command that is doing pretty much the same as Rsync, with only difference that it can mirror files over *FTP* (*old but gold File Transfer Protocol*).

```
lftp -u FTP_USERNAME,FTP_PASSWORD -e 'mirror REMOTE_DIRECTORY  
LOCAL_DIRECTORY' FTP_SERVER_HOSTNAME
```

Enjoy and thanks to my dear friend Amridikon for the tip ! :)
