# Windows add to startUP / Make MS Windows XP / Vista / 7 and 8 to start program automatically on start-up

Author: admin

On *Linux*, it is quite easy to run programs on OS boot via /etc/rc.local.

For Linux admins like me who are not much into Windows, it is interesting **How it is possible to make Application run on Windows boot?** 

Running Program auto on boot is precious, especially for running small custom written .BAT (batch scripts)

On *Windows XP* there is a **Startup Folder**. Anything placed in **Startup folder** launches whenever Windows start.

- Click on Start button -> All Programs, right mouse click on Startup folder -> Open.
- Open Folder location that contains Program want to make start-up on Windows start.
- Right-click Program and then click **Create Shortcut**. Newly created shortcut appears in same location as the original item.
- Drag with Mouse new shortcut into the **Startup folder**.

Alternative way to reach Windows **Start-Up** (on Windows XP) is via C:\Users\Documents and Settings\All Users\Start Menu\Programs

To remove already, scheduled program to start, just remove it from *Startup Folder* or run in command prompt **Start -> run (cmd.exe) ->** 

#### msconfig

And from StartUp tab, remove tick from Program you'd like to disable:

On Windows Vista / 7 Add / Remove Program on Start-up is done also from: Control Panel -> Program -> Change Startup Programs

On Windows 8 to add / remove Programs to Startup (press Ctrl+C) in Run box that appears run:

#### %APPDATA%\Microsoft\Windows\Start Menu\Programs\Startup

Then just like on XP, create shortcut and *Paste Shortcut* linked to program to run on *Win Start* 

That's all you have to do on *Next Windows Startup-up Program will automatically run*. Following same logic it is possible to make *Word DOC / .TXT / PDF / Mp3 / Movie* run automatically on

Windows boot. Enjoy:)

**P.S**. Dear Windows Admin Gurus, I'm sorry if this article was too boring, please accept my kind apologies if so:)
