Change GNOME lock time settings in Linux

Author: admin

In **GNOME 3.X The screen lock time setting** is set either to *1 minute 15 minutes or NEVER*. So what if you would like to,

Set the gnome screen lock settings value to 30 minutes or one Hour $\,$

Here is how:

For 30 minutes lock screen setting:

linux:~\$ gsettings set org.gnome.desktop.session idle-delay 1800

1/3

Set GNOME lock time to 1 hour	
linux:~\$ gsettings set org.gnome.desktop.session idle-delay 3600	
The setting is set in seconds so quickest way to calculate is to divide by 60 (secon easily the time you like with BC (arbitrary precision calculation language) like so:	
linux:~\$ echo '3600/60' bc 60	
Lets say you would like to set your screen to lock every 3 hours, the delay value org. gnome.desktop.session would be:	to set in
linux:~\$ echo '3600*3' bc 10800	

Once you set the value to a different than the 3 recognized ones would show in **GNOME Control**

Center as Never (depending on the distro).

3/3
