

How to convert Adobe PDF file format to Microsoft Word DOC on MS Windows 2000 / XP / Vista / 7

Author : admin

I had to convert Adobe PDF file to Microsoft Word (.doc) file on Microsoft Windows OS for a friend. There is plenty of software available to convert PDF to DOC on Windows, as well as few web-site services claiming to convert correctly PDF to DOC. Converting PDF to DOC is easy and can be done with Open Office, however the reverse process is a real pain in the ass. I tried a dozen of free web services to convert an ancient Latin writing PDF to DOC but none of them couldn't properly convert it. Failing with the web services as a tool to convert, I've turned to seeking a tool that will do the trick. After trying few PDF to DOC converters which failed to produce a properly structured editable DOC from the PDF file, I've come across **ABBYY PDF Transformer 2.0**. Abby PDF Transformer finally did it ...

I've tried hard to look for a free software good PDF to DOC converter alternative for Windows but it seems as of time of writing this post there is no GPLed free software that does properly convert PDFs to MS WORD DOC

Using *Abby PDF Transformer 2.0* is a piece of cake all I had to do is select the PDF file (pressing Open PDF) and then click on Convert (in right bottom corner). Below is a shot of **Abby PDF transformer** in action.
