

## How to fix logging issues with Varnish configured to log client IP Addresses in Apache log

**Author :** admin

Since a couple of days, I've noticed that client IP addresses are logged twice in my Apache log file **httpd-access.log**. That's definitely shit. Here is how I solved the issue:

I modified my:

**/usr/local/etc/varnish/default.vcl** that after the modification the file looked like:

```
backend default { .host = "127.0.0.1"; .port = "8080"; } sub vcl_recv { if (req.url ~
"\.(jpg|jpeg|gif|png|tiff|tif|svg|swf|ico|mp3|mp4|m4a|ogg|mov|avi|wmv)$") { lookup; } if (req.url ~
"\.(css|js)$") { lookup; } } sub vcl_fetch { if( req.request != "POST" ) { unset obj.http.set-cookie; } set
obj.ttl = 600s; set obj.prefetch = -30s; deliver; }
```

Well that's it after restarting varnishd with:

**/usr/local/etc/rc.d/varnishd restart**

Client ip is now logged only once in Apache's log file, Cheers! :)
