

Lastpass - store and manage website passwords plugin for Firefox

Author : admin

Lastpass is a handy plugin allowing you to save and manage website passwords. As with other password manager programs, it is necessary to set one Master password which allows you to view all other website login passwords. Of course for people very concerned of security LastPass might not be the best choice, as it can reveal a possible malicious person all passwords by stealing just one. Besides that **lastpass** plugin sends and stores password on lastpass.com, so anyone who might hack into their server will get your account details and password. Anyways, still for the casual web user which is very lazy and less security concerned it nice.

As I see on the [Lastpass's website](#) it even was mentioned in *Forbes Business Magazine* :)

The quickest way to install it in Firefox is to follow menus:

Tools -> Add ons -> Search (type lastpass) and click Install

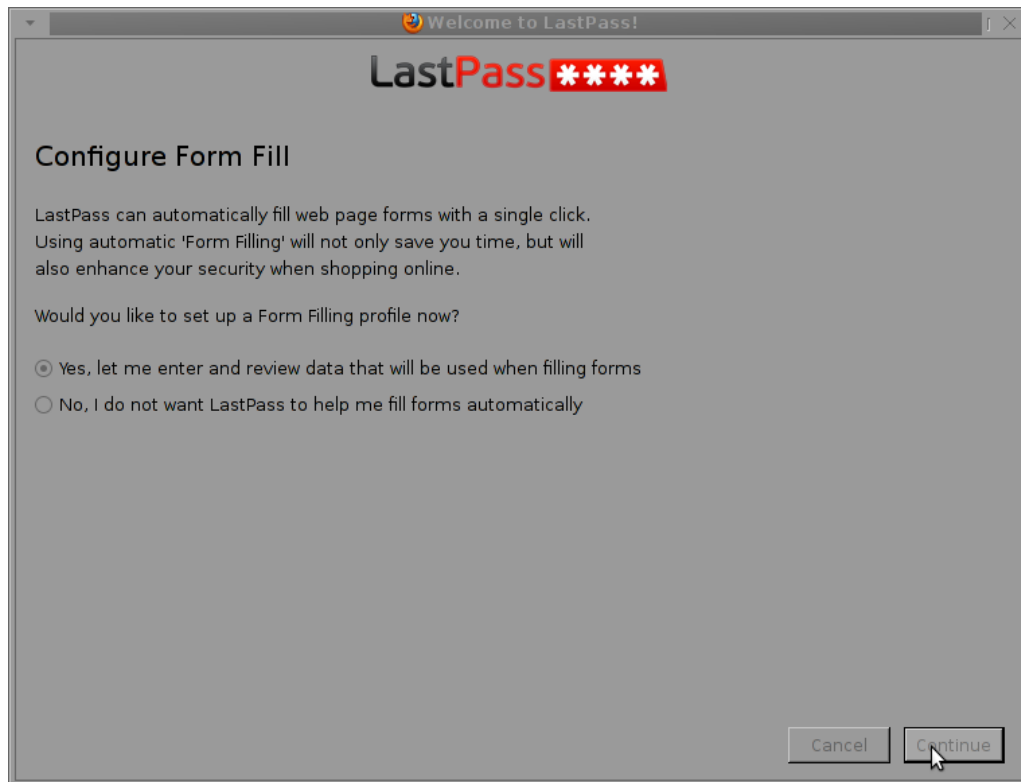

After the usual browser install the plugin loads up, it is necessary to create account with lastpass.com and *tick the Agreement to send encrypted password data to LastPass.*

A screenshot of a web browser window displaying the LastPass 'Re-enter Password' dialog. The window title is 'Welcome to LastPass!'. The main heading is 'LastPass ****'. Below this, the text reads: 'Re-enter Password'. A sub-header says: 'To create your account, please re-enter your LastPass master password'. A red warning block states: 'IT IS CRITICAL THAT YOU NEVER FORGET YOUR NEW LASTPASS PASSWORD. To protect your privacy and keep your data confidential, we DO NOT know what your LastPass password is. We also DO NOT keep a copy or backup of it.' Below this, a paragraph explains: 'But I'm a forgetful person...what should I do if I forget my password? If you do end up forgetting your LastPass master password, contact us and we will email you your password reminder. Your password reminder serves to remind you of what your actual password is, while still maintaining its secrecy.' At the bottom left, there is a label 'Re-enter Password' next to a text input field. At the bottom right, there are two buttons: 'Cancel' and 'Create an Account'.

Once it is configured interesting feature of LastPass is *automatic filling up of Forms*.

You know how much often it is nowadays to create new registration with websites. If you have to create new registrations too frequently and fill up the same data again and again you start to get very irritated. Here *LastPass* will be mostly helpful as it can *fill up around web-forms automatically* with a predefined *Form data (Fork Skele)*.

A screenshot of the LastPass application window titled "Add Form Fill Profile". The window has a grey background and a title bar with standard window controls. The main content area features the LastPass logo (a red circle with a white 'P' and the word "LastPass" in black) followed by four red asterisks. Below the logo, there are two input fields: "Profile Name" with the text "Default" and "Profile Language" with a dropdown menu showing "English". Below these fields are several tabs: "Personal Information", "Contact Information", "Credit Card Information", "Bank Account Information", "Custom Fields", and "Notes". The "Personal Information" tab is selected. It contains several input fields: "Title" (a dropdown menu showing "Please Select"), "First Name", "Middle Name", "Last Name", "Username", "Gender" (a dropdown menu showing "Please Select"), "Birthday" (three separate dropdown menus for day, month, and year), "Social Security Number", "Company", "Address 1", "Address 2", "Address 3", "City / Town", "County", "State / Province" (a dropdown menu), "ZIP / Postal Code", "Country" (a dropdown menu showing "Netherlands"), and "Time Zone" (a dropdown menu showing "(+02:00) Amman, Athens, Istanbul, Beirut, Cairo, Jerusalem"). At the bottom left, there is a checkbox labeled "Require Password Reprompt" which is unchecked. At the bottom right, there are "Cancel" and "OK" buttons. A mouse cursor is pointing at the "OK" button.

After filling up all data, you will be redirected and automatically logged into *LastPass's website Vault*. This is a webplace, giving you access to see and manage all password via lastpass.com. You can put different identities inside have numerous pre-filled forms to be used as a samples for automatic form

filling, add notes, create groups etcetera.

The plugin's idea is good and useful and as I said most people might have no objections using it still I don't like fact that a 3rd party site (Lastpass.com) stores my data is very so though it was fun to test it I doubt to seriously use it in future.
