

Mount ISO Image file in Windows 7 and Windows Vista (Virtual Clone Drive)

Author : admin

In Microsoft **Windows 8**, there is embedded way to mount ISO files. However in **Windows 7** still there is no way to mount ISO image files. I just installed a new Windows 7 on my office work notebook given by Hewlett Packard and had to mount an ISO with *Microsoft Visio*. Normally all know the two standard programs to mount ISO images in Windows;

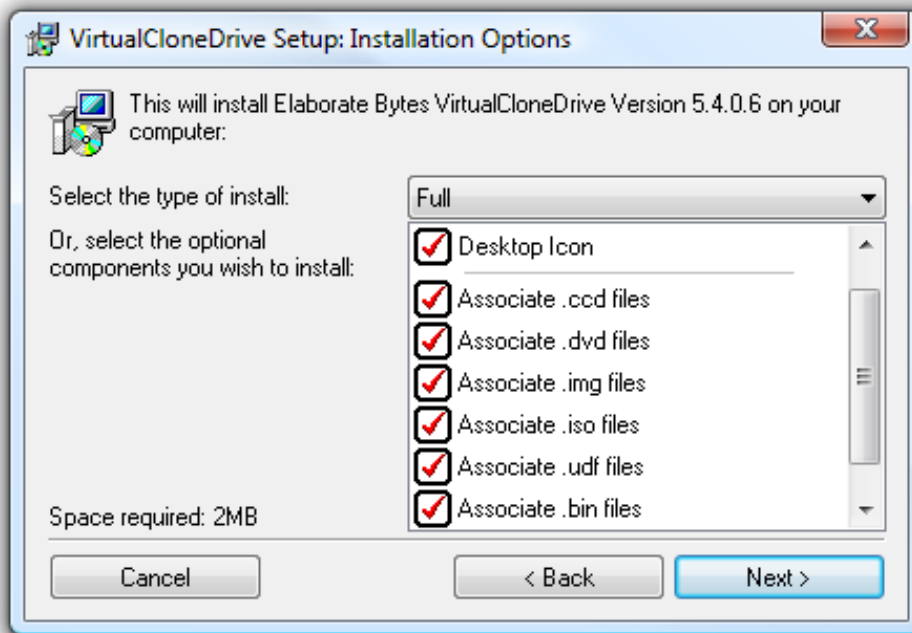

[1. DaemonTools Lite](#)

[2. MagicISO](#)

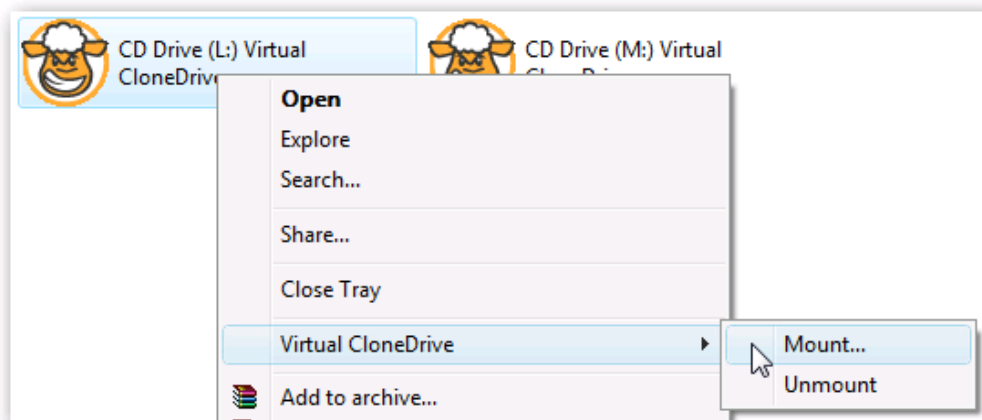

3. Virtual CD-ROM (Microsoft program)

After consulting my colleague I was recommended to rather install **Virtual Clone Drive**, for the reason Daemontool's latest versions install Spyware on Computer. On the other hand *MagicISO* is nice one but a bit obsolete already.

Launching installation prompts opens below install Window;

As you can see from installation **Virtual Clone Drive supports ISO / IMG / UDF / BIN and CCD images**. Once installation complete to Mount an ISO into separate drive quickest way is to Double click on Image. Also it can be done from program by navigating to:

From my little experience so far with *Virtual Clone Drive* I would recommend Windows users to better install it instead of freeware alternatives. VCD feels more robust.
