

## Nokia Communicator 9300i Call Register (Received Calls, Missed Calls, Dialed Calls) cannot delete problem

**Author :** admin

There is a terrible bug in the Nokia Communicator firmware (the bug appears in Nokia 9300i running Symbian Software Series 80 v2, my Nokia (Control Center -> About Product) reports version 5.50. The bug is really ugly since the phone fails to delete, received calls, missed calls, dialed calls records.

It took me a while to track the error, however finally I got it, thanks to a friend of mine who has experienced already the same on his phone.

The error was caused by something pretty dumb. OK enough gibberish, the problem is **caused by a wrong system date!**, how stupid, fixing the

date from Control Center is simply and effective fix. Even though that would fix your phone so you can successfully delete in the future from call register, you won't be able to see your received calls before you fix the issue.

Therefore after some googling I've found a nice software that is able to manage your call register logs in a much bug free way the soft I've found from rapidshare,

and luckily comes with a crack. You can download (Advanced Call Manager)

from the mirrored copy I made for you here [Download Advanced Call Manager \(ACM\) version 2.51 \(Cracked\)](#).

Another great thing about Advanced Call Manager is that all your in and out calls + missed calls are logged and ready to be found, even those not showing up in the normal Call Register software that comes bundled with the phone.
