

## Problems with Skype microphone on Thinkpad R61i with Debian Linux again and fix

**Author :** admin

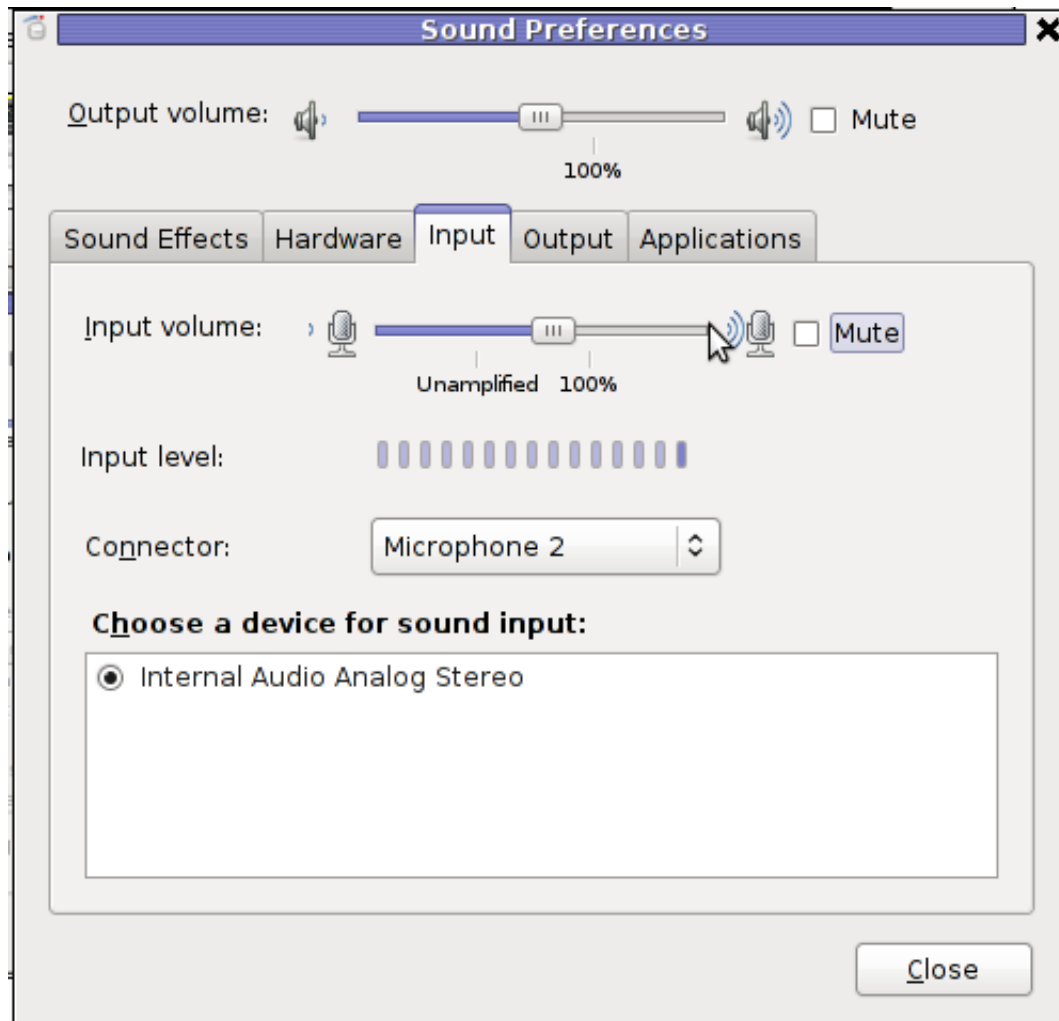

Once again, I experienced **Skype microphone issues!!!** Its getting really annoying, since almost randomly I get issues. Skype is a terrible program and depending on a proprietary thing like Skype is a real pain in the ass.

This time it was totally strange as there was no way to record any voice inside Skype Call while testing with **(Echo / Sound Test Service)**

After a lot of puzzling and getting a bit angry I found this time the issues are caused by some settings which somehow changed in **GNOME Sound Preferences** microphone to mute:

You see on above screenshot that somehow the stupid thing get muted :|

After unmuting and *restarting Skype*, the **microphone started working in Skype again ...**
