

Skype on Nokia ExpressMusic 5800 with Fring

Author : admin

A friend of mine has bought a new Nokia Express Music 5800, yesterday evening He wanted to use skype on his nokia so we played a bit together in installing an app that provides skype on that mobile phone. There are two applications which run on the phone. 1. Skype Lite downloaded from [Skype's mobile phone version download page](#)

However, the selected version was pretty old it was for Nokia 7370.

This solution worked out, unfortunately there was no skype voice calls on it, neither video calls.

2. We tested [Fring](#) For convenience reasons I did a mirror of the Nokia ExpressMusic 5800, which by the way runs on top of Symbian OS ver. 9.4. Here is a [link to the Fring for Nokia ExpressMusic 5800](#)

We tested also the fring's skype protocol abilities, trying out both video and audio calls which proved to work okay.

Nevertheless, during playing with the fring the program crashed once and required to be rebooted to return to proper operation mode.

Credits for this post go to Nomen who did most of the work on testing fring on his phone.

In the mean time tonight, a new year is approaching. Let's all hope this year will prove to be peaceful, fruitful and

full of grace for every inhabitant on earth.

In regard to the new year approaching I Wish you a Really, Really Happy and Peaceful New Year!
