COMPUTAPRINT brings a new dimension to computer printout

THIS NEW SERVICE OFFERS MANY STRIKING ADVANTAGES TO COMPUTER USERS :

- 1 Immediate low cost communication—via magnetic tape—between computer and the world's fastest phototypesetting system (Lumizip 901).
- 2 Complete pages are produced at high speed on film.

- 3 Many sizes and varieties of traditional printing typefaces.
- 4 Great saving of computer time by writing to magnetic tape instead of line printouts.
- 5 Avoidance of time-consuming computer paper tape output, which is required to control conventional typesetting equipment.
- 6 The possibility of a great saving in paper, printing and binding costs.
- 7 A considerable reduction in postage and distribution costs is possible.

Telephone or write to Mr J. E. Mclean
Computaprint Limited
 White Bear Yard, Clerkenwell Road
 London EC1. Telephone: Brunswick 1251

- COMPUTAPRINT MAKE TWO PROPOSALS TO COMPUTER USERS:**
- i A study of requirements leading to the processing of data supplied on magnetic tape, cards, or paper tape.
 - ii A system study and advice so that customers can write programs for their own computers to control the Computaprint Lumizip 901.

from shoes

Stock control for a shoe manufacturer and retailer means accounting for innumerable pairs of boots and shoes. 'Stock' control for a broker involves watching facts and figures for thousands of companies quoted daily on World Stock Exchanges.

Both William Timpson Ltd., of Manchester and Intinco Ltd., of London (producers of the world's most advanced Real-Time computer-to-office link for stockbrokers) found the answer to their 'stock' control problems in a UNIVAC computer.

These are but two of the British concerns who have realised that if you want to keep a few jumps in front of the competition you need a computer that's streets ahead. It is no coincidence that UNIVAC is becoming increasingly involved in go-ahead British business and industry.

Integrated stock and warehouse inventory control, distribution of footwear to more than 260 retail shops throughout the U.K. will be handled by the modern UNIVAC computer soon to replace the older UNIVAC system presently used by William Timpson Ltd.

UNIVAC is involved

to stockbrokers..

Brokers who subscribe to the SCAN system operated by Intinco Ltd. of London can get immediate, up-to-the-minute data on stocks and shares and instant answers to enquiries through a small keyboard in their own offices. Intinco's UNIVAC 418 Real-Time system works both ways. So brokers can hold a keyboard "conversation" with the computer.

How
can **five** people
use the **same**

IME 84

electronic desk calculator

even
when working
in separate
offices **?**

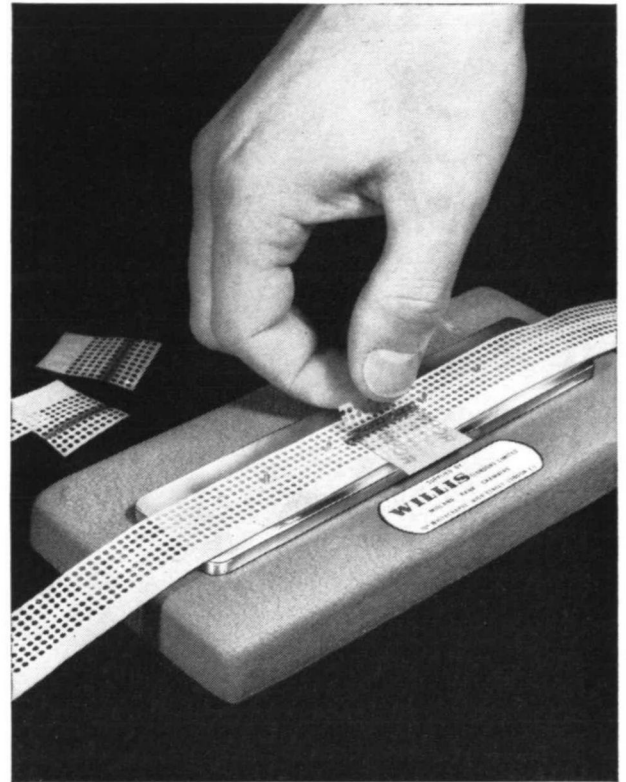

The soundless IME 84 is the first-ever electronic desk calculator which allows for optional peripheral units to be linked to it. These include remote 'satellite' keyboards as shown above. They can provide for 2, 3, 4 or even 5 operators to share all the facilities of a sophisticated desk calculator—and capital cost is dramatically reduced!

Branches and full service throughout the U.K.

Butt splicing -this method is quick, efficient, economical

The Robins 'Gibson Girl' Splicer is a clean and simple method of butt splicing paper, oiled paper and Mylar punched tapes, and can be used for even the most sensitive readers.

Six pins are set within a satin chrome splicing block for precision alignment of the tape, which is spliced with pre-punched pressure sensitive adhesive patches. A cutting groove accurately guides the cutting blade, permitting this unit to be used for editing, correcting, looping and repairing of tapes.

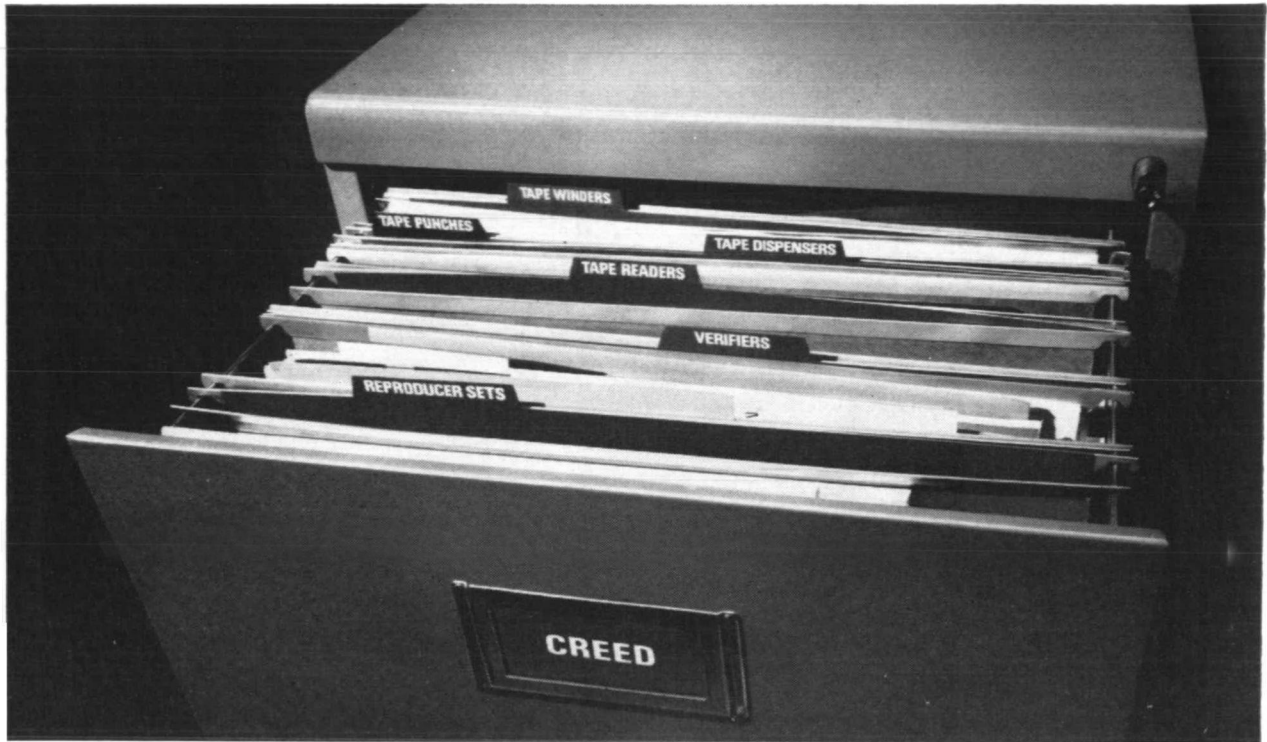

Splicing patches available separately ex-stock £1.10.0 per 100, or £13.10.0 per 1000.

WILLIS

Data Processing Equipment Specialists

Willis (London) Limited

Midland Bank Chambers,
101 Whitechapel High Street,
London, E.1. B1Shopsgate 3425.

Your equipment file is only as helpful as its contents and this Creed literature makes it very helpful indeed

From the makers of the teleprinter comes up-to-date literature on their range of data processing equipment.

Tape Punches; Tape Readers; Verifiers; Keyboard Tape Punches; Reproducer Sets; Tape Winders; Tape Dispensers.

This literature—which contains full details and illustrations—is, of course, completely free.

That's not all. Because Creed recognise that everyone's needs are different, they offer a free advisory service too. This

service covers every aspect of telegraph communications and paper tape handling problems. Creed, one of the first in the field, are fully qualified to supply the answers to any problem in these areas.

Write or telephone now for a full set of publications covering the entire Creed range. Creed and Company Limited, Hollingbury, Brighton, Sussex. Telephone: Brighton 507111. Telex: 87169. An associate of ITT.

Please send me free details of the Creed range of equipment.

UNIVERSITY OF BELFAST

Senior Lectureship or Lectureship in Computer Science

The Senate of the Queen's University of Belfast invites applications for a Senior Lectureship or Lectureship in Computer Science from 1st April 1967, or such other date as may be arranged. The University has a card and magnetic tape based I.C.T. 1905 computer system. This will be replaced by a disc and drum oriented I.C.T. 1907 system with limited multi-access facilities in 1967.

The University has established both graduate and post-graduate curricula in Computer Science. Salary range for a Senior Lectureship is £2,605 to £3,415 plus contributory pension rights under the F.S.S.U. and for a Lectureship £1,470 to £2,630 plus F.S.S.U. Initial placing on the salary scale will depend on qualifications and experience. Applications should be received as soon as possible. Further particulars may be obtained from G. R. Cowie, M.A., LL.B., J.P., Secretary.

MCGILL UNIVERSITY, MONTREAL CANADA

IBM 360 MODEL 67

The Computer Centre presently operates an IBM 7044 with magnetic tape drives, a 2302 disk drive and on-line card read punch and line printer.

It is planned to install an IBM 360 Model 67 early in 1968. This will provide time-shared services to research projects within the university and to industry in the Montreal area.

Vacancies exist now or will exist in the next six months for both academic and non-academic staff.

ACADEMIC STAFF

Academic positions are available for experts with extensive computer experience in numerical analysis, statistics, or operational research. Salary \$9,000 up.

It is expected that a department of Computer Science will be established in the near future, to provide graduate training and conduct research.

NON-ACADEMIC STAFF

Systems Programmers – experienced in maintaining and modifying operating systems. Salary to \$8,000.

Programmers – experienced, with university degree. Salary \$5,000 up.

Operations Supervisor – to supervise computer operations. Salary \$7,000–\$10,000.

Enquiries should be mailed to
Prof. W. D. Thorpe, Director, Computing Centre,
McGill University, Montreal 2, Quebec, Canada

INTERNATIONAL FEDERATION FOR DOCUMENTATION

PROCEEDINGS OF THE 1965 CONGRESS

Edited by Robert A. Harte

A permanent record of the 31st Meeting and Congress held at Washington, D.C. in October 1965. The thirty-five articles covering the latest theory and techniques in documentation science constitute a valuable reference source.

272 pages 30 figures 9 tables 11 × 8½ inches 87s 6d

SIMULATION TECHNIQUES FOR DESIGN OF WATER-RESOURCE SYSTEMS

Maynard M. Hufschmidt, Professor of City and Regional Planning, University of North Carolina and Myron B. Fiering, Assistant Professor of Engineering and Applied Mathematics, Harvard University

Examines computer simulation as one method of planning and designing complex water-resource systems. It presents the steps and procedures required to institute such a program, and contains a detailed report on the application of these procedures to a simulation program for a specific water-resource system—the Lehigh River Basin in Pennsylvania. This book is a companion volume to an important work which has just been re-issued—*Design of Water-Resource Systems* by Arthur Maass (90s)

228 pages 51 illustrations 14 tables 55s

IFIP: (INTERNATIONAL FEDERATION FOR INFORMATION PROCESSING) 1965 CONGRESS PROCEEDINGS, PART 2

A continuation of the 1965 Congress Proceedings containing those papers not submitted in time to appear in Part 1. They cover automata theory and simulation of thought processes, computer programming, organisation of large storage systems, and artificial intelligence.

350 pages 150 illustrations 11 × 8½ inches 95s

AFIPS CONFERENCE PROCEEDINGS

VOLUME 29: 1966 FALL JOINT COMPUTER CONFERENCE

Seventy papers from the most recent conference held by the American Federation of Information Processing Societies in San Francisco. The papers cover the entire range of information processing from systems design and theory to descriptions of the latest techniques and equipment.

830 pages 500 illustrations 11 × 8½ inches £8 8s

What have we got to smile about?

Quite simply the satisfaction of knowing that our reputation for accuracy, reliability and speed of service are unsurpassed.

Don't be misled—we're not complacent; the Service our customers demand keeps us on our toes—we like it that way; we'd get bored if they didn't.
