CALCSTAR™

CALCSTAR, an advanced electronic spreadsheet, is powerful yet easy to learn and simple to use. CALCSTAR is an effective business planning tool with instantaneous answers to your "What if" questions. CALCSTAR can be used for forecasts, plans, reports, estimates, studies, and analyses relieving you of the drudgery of endless recalculation and giving you more creative thinking time. CALCSTAR is compatible with WORDSTAR® providing the ability to add professional touches like **boldface** or underline to proposals, marketing plans, or annual reports.

CALCSTAR provides flexible spreadsheet formatting with variable column width and decimal precision. The edit line scratch pad allows CALCSTAR to function as a calculator and advanced mathematical capabilities include logarithms, exponents, and linear regressions. CALCSTAR has the ability to merge sections from several spreadsheets into an overall final report.

Features of CALCSTAR include the following capabilities:

- A prearranged cursor course stops the cursor only at cells that are subject to frequent change.
- Ability to tab the cursor to move it from cell to cell without using the usual cursor commands.
- Online help is available, simply press "H" to display a help menu which will guide you to display information about cursor controls, data entry, extended commands (extend the screen from 10 to 15 rows), or mathematical equations.
- CALCSTAR can display the approximate number of entries that can still be made using the existing memory. If memory is running low you can move its contents to disk to make more space available.
- Existing entries can be recalculated based on a new entry that may affect their values.
- Text may be centered or left or right justified.
- New columns or rows can be inserted or deleted.
- Current information displayed on the worksheet can be merged with saved files.
- A worksheet may be saved on a disk and later recalled to the screen or printed.
- Arithmetic operations include addition, subtraction, multiplication, division, exponential numbers (powers), and percents.
- Logical operations are, AND, OR, & IF. . . . THEN. . . . ELSE.
- Relationships are equal to, not equal to, less than, less than or equal to, greater than, and greater than or equal to.
- Functions available to CALCSTAR users include max, min, count, sum, average, square root, common and natural logs, absolute value, exponential value, and regression (computes a linear regression line, lets you insert values of both dependent and independent variables, and determines the slope of the regression line.)
