WORDSTAR®

WORDSTAR is a premier word processing program that has proven its value in the competitive marketplace because you can do so much with it — and do it easily.

The features that make it so popular include:

Automatic Return

The only time you have to press the return key is when you are starting a new paragraph. The cursor will return automatically when it reaches the right-hand margin. You simply continue to type.

Make Changes

Insert, delete, or change information anywhere within your document. WORDSTAR will make all the text adjustments.

- If you want to move a big block of text from one place in the document to another, WORDSTAR can do that for you too. You can even insert another document without having to retype it.
- Change a word or phrase to another wherever it occurs within the document. WORDSTAR will even let you approve each of these changes one at a time.

View WORDSTAR Commands

Keyboard commands are shown at the top of the screen. If you want to find out how to tell WORDSTAR to do something, just look at these command "menus". And when you no longer need this online help, tell WORDSTAR not to display the commands and use the space for displaying text.

Align Decimal Points

When entering columns of numbers, just tell WORDSTAR where the decimal point should be. Then tab to that place and start typing; your numbers will line up perfectly.

Design The Printed Page

- What you see on the screen is what will be printed. Design the page by selecting line spacing, column width, and margin size. If your text is wider than the screen, don't worry; the words will slide across the screen. You may not always see the left-hand margin, but you will always see what you write.
- Change your margins at any time — even in the middle of a long document. WORDSTAR will reformat the text just the way you want it and if some words have to be broken by hyphens, WORDSTAR will stop and let you choose where to place the hyphen.

- Type special codes within the text to tell the printer to print **bold**, underline, or change print color. You can even specify subscripts (H₂O) or superscripts (X²).

Link to Companion Programs

SPELLSTAR™ is a program that allows you to identify and correct misspelled words in WORDSTAR files.

SPELLSTAR does this by comparing each word in your document to words contained in a dictionary built into the computer's memory.

- SPELLSTAR comes equipped with a dictionary of over 30,000 words, and you can add your own special terms to it.
- Create special dictionaries of your own.
- Have SPELLSTAR read any file and add new words it finds to a dictionary of your choice.

MAILMERGE® is a program that lets you easily create form letters and mailing labels from WORDSTAR files.

You can insert customized values into a document as it is being printed.

MAILMERGE lets you create WORDSTAR documents that contain special names for values that will be individualized for each recipient during printing.

As each document is being printed, specific values (up to 200 characters long) will be automatically inserted from a data file, or directly from the keyboard if desired.

Merge WORDSTAR Files

MAILMERGE lets you merge several WORDSTAR files without page breaks. You get one continuous document with sequential page numbering.

Vary Print Parameters

Print the same information in different formats and have it read from the same data file.

Stop The Printer

By merely typing the letter "P" at the keyboard you can stop the printer at any time.

Pause to Change Diskette

Specify a print pause in your document to allow you to comfortably change diskettes.
